

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-8 (canceled)

Claim 9 (original): A system comprising:

a processor;

a storage associated with said processor to store a first database with a plurality of records, each containing a telephone number, a name and other information; and

an application stored in said storage that enables said processor to access the telephone number of a second party to an ongoing telephone call, search said first database for a record containing said telephone number, and display a name, telephone number and other information associated with said record.

Claim 10 (previously presented): The system of claim 9 wherein said application includes instructions to automatically initiate a search for information related to said record in a second database.

Claim 11 (previously presented): The system of claim 10 wherein said application includes instructions to transmit a search query and receive search results to obtain extended data related to said record in a database external to said system.

Claim 12 (previously presented): The system of claim 11 wherein said application includes instructions to automatically store said information in said first database if said information is found in said external database.

Claim 13 (currently amended): The system of claim [13] 9 wherein said storage stores a user preference table that

indicates a preferred search hierarchy among a plurality of databases.

Claim 14 (original): The system of claim 9 wherein said storage stores a sequential listing of telephone numbers of outgoing telephone calls and caller identification information for incoming telephone calls.

Claims 15-22 (canceled)

Claim 23 (previously presented): A method comprising:
receiving in a first system a search query for information associated with a second party during a telephone call;

obtaining the information from the first system if it is present in the first system;

searching at least one remote source for the information if it is not present in the first system; and

providing the information to the first system from the remote source.

Claim 24 (previously presented): The method of claim 23, further comprising displaying the information on a display of the first system.

Claim 25 (previously presented): The method of claim 23, further comprising storing the information in a database of the first system.

Claim 26 (previously presented): The method of claim 25, further comprising storing the information in a record in the database associated with the second party.

Claim 27 (previously presented): The method of claim 26, further comprising synchronizing the record with a stored record, in a computer coupled to the first system.

Claim 28 (previously presented): The method of claim 23, further comprising storing the telephone call in a call history in the first system.

Claim 29 (previously presented): The method of claim 23, further comprising enabling a user to define a search path for searching a plurality of remote sources for the information.

Claim 30 (previously presented): The method of claim 29, wherein the plurality of remote sources includes a remote service provider and the Internet.

Claim 31 (previously presented): An article comprising a medium storing instructions which, if executed, enable a system to:

receive a search query in the system for information associated with a second party during a telephone call;

obtain the information from the system if it is present in the system;

search at least one remote source for the information if it is not present in the system; and

provide the information to the system from the remote source.

Claim 32 (previously presented): The article of claim 31, further comprising instructions which, if executed, enable the system to display the information on a display of the system.

Claim 33 (previously presented): The article of claim 31, further comprising instructions which, if executed, enable the system to store the information in a record associated with the second party.

Claim 34 (previously presented): The article of claim 33, further comprising instructions which, if executed, enable the

system to synchronize the record with a stored record in a computer coupled to the system.

Claim 35 (previously presented): The article of claim 31, further comprising instructions which, if executed, enable the system to store the telephone call in a call history in the system.

Claim 36 (previously presented): The article of claim 31, further comprising instructions which, if executed, enable the system to allow a user to define a search path for searching a plurality of remote sources for the information.

Claim 37 (previously presented): The system of claim 9, wherein the system comprises a portable device to be coupled to a telephone line or a computer system.

Claim 38 (previously presented): The system of claim 37, further comprising a printer housed in the portable device.

Claim 39 (previously presented): The system of claim 37, wherein the portable device is coupled to the computer system to synchronize data between the first database and a memory of the computer system.
